# 1. Documentation version history

The table below provides information on document version history:

Version	Date	Description
1.0	2021-03-19	New documentation format. From now on, all data is provided only in the main description of the API.
1.0	2021-03-19	Updated JSON specification of POST /reports/accounting-data-pack-b2c?first={integer}?count={integer} method. Added new fields. Mocking data will be shared after deployment.
1.0	2021-03-19	Updated JSON specification of POST /reports/accounting-data-pack-b2b-meters-level method. Added new fields. Mocking data will be shared after deployment.
1.1	2021-03-23	Added new version of method: <ul style="list-style-type: none"><li>GET /gateway/supplier/v3/get-declaration-data?first={integer}&amp;count={integer}&amp;customerId={string}&amp;objectNumber={string}</li></ul>
1.2	2021-05-10	(will be deployed in next sprint) Rename "contractType" to "contractModel" and added new json fields: "clientName", "contractType", "currentSupplierType" in: <ul style="list-style-type: none"><li><del>Method client objects information</del></li></ul>
1.3	2021-09-02	(will be deployed in next sprint) Added contract data controller.

Version	Date	Description
1.4	2021-09-20	(will be deployed in next sprint) Added contract termination data controller.
1.5	2021-10-08	Added supplier change notification v2 controller
1.6	2021-10-15	The structure of the sample data has been changed to json format (contract termination data controller, supplier change notification v2 controller).
1.7	2021-10-27	Added new json fields: "noCoowner", "ntGetCoownerConsent", "coownerConsentDate" in: <ul style="list-style-type: none"> <li>• Method contract-termination-details (possible response data)</li> <li>• Method contract-termination-notification (possible request)</li> </ul>
1.8	2021-11-29	The structure of the sample data has been changed to json format: <ul style="list-style-type: none"> <li>• contract change notification controller</li> </ul>
1.9	2021-12-14	Added the new contract object controller
2.0	2021-12-14	Added the new tariff plan change notification controller
2.1	2021-12-22	Added the new contract list controller

Version	Date	Description
2.2	2021-12-22	Added the new contact change notification controller
2.3	2021-12-22	Added the new order controller
2.4	2022-01-24	<ul style="list-style-type: none"> <li>Added the new sandbox method: „POST /gateway/object/all/active/list?first={integer}&amp;count={integer}&amp;sortKey={string}&amp;sortOrder={ASC/DSC}“</li> <li>Changed the controller name from “Contract object controller” into “Object controller”</li> <li>Changed url from “POST /gateway/contract-object/list?first={integer}&amp;count={integer}&amp;sortKey={string}&amp;sortOrder={ASC/DSC}” into “POST /gateway/object/my/active/list?first={integer}&amp;count={integer}&amp;sortKey={string}&amp;sortOrder={ASC/DSC}”</li> </ul>
2.5	2022-01-24	<p>Changed „Tariff plan change notification controller“ into „Notification contract tariff plan controller“</p> <p>Changed URL in the Notification contract tariff plan controller:</p> <ul style="list-style-type: none"> <li>POST /gateway/notification/contract/tariff-plan/list?first={integer}&amp;count={integer}&amp;sortKey={string}&amp;sortOrder={ASC/DSC}</li> <li>POST /gateway/notification/contract/tariff-plan</li> <li>POST /gateway/notification/{notificationId}/contract/tariff-plan/cancel</li> </ul> <p>Changed „Contact change notification controller“ into „Notification contract contact controller“</p>

## 2. Preface

The Common Data Exchange Platform (hereinafter referred as *DH Platform*) Gateway is a component enabling independent electricity suppliers to directly access DH Platform from within their IT systems and thus helps automate the following business processes:

- Obtaining electricity consumption history data with the purpose of providing commercial proposals for the potential clients – residential and industrial electricity consumers
- Providing information to Distribution System Operator about the new contracts with the clients who have switched their supplier

DH Gateway provides open standards-based interfaces allowing independent suppliers themselves (or with outside assistance) integrate their IT systems with DH Platform.

This document provides technical information on DH Gateway interfaces which is needed to integrate suppliers' information systems with DH Platform.

### 3. Environments

There are two DataHub Gateway environments the supplier might access:

- “Sandbox” environment
- Production environment

DataHub Sandbox environment made of Mock API Gateway with mock requests and responses (scenarios). There are no connection to database or any data source, all possible requests and answers are hard-coded into mock API source code and has no any data selection logic or rules. This data is real depersonalized data from DSO customers. Sandbox requests and responses scenarios will be provided in additional document and it should be used just for preparation to integrate with DataHub production API environment or testing purposes.

Environment	Link	Swagger Link	WEB Interface
Sandbox	<a href="https://dh-sandbox-api.eso.lt">https://dh-sandbox-api.eso.lt</a>	<a href="https://dh-sandbox-api.eso.lt/swagger-ui.html">https://dh-sandbox-api.eso.lt/swagger-ui.html</a>	-

## 4. Suppliers digital certifications

In both the testing and production environments of the DH Gateway component, the identity of the supplier is established using a TOKEN, which the supplier's information system must provide each time the DH Gateway network service is called.

### To get started:

1. The DSO responsible person sends the JWT key (JSON Web Token) to be used with each request to the DH API.
2. To make requests to the DataHub Gateway API - the TOKEN submission in the case of cUrl takes place.

## 5. Mocking scenarios

### 5.1 Supplier change notification

If Supplier would like to send supplier change notification, its need to know all customer data (like object numbers, personal code or customer code, etc.). To get client data supplier can call method "*supplier/client/client-objects-information*", for example provide clientId: 89876543210 (see possible request and response data no.3) and will get response list of this client object numbers and its information. This method response data can be used in "*/supplier/v2/supplier-change-notifications*" method (see possible request data) to send message to DSO, that supplier has signed agreement with mentioned client.

Supplier change notification can be cancel in one hour. In our scenario we say, that this message is "fresh" and still 1 hour did not pass, so message still can be canceled. If supplier call "*/supplier/cancel-supplier-change-notifications*" and provide message ID number which was provided with "*supplier/client/client-objects-information*" response, when message will be canceled and DSO will not register this agreement.

### 5.2 Client object information

If supplier don't know all required client data for supplier change notification or other purposes, supplier can call method "*supplier/client/client-objects-information*" and provide one of the parameters which is known: "*clientId*", "*customerId*" or "*objectNumber*". The response will provide all object information like object numbers, addresses, client personal or company codes and so on. Please see possible requests and response data examples near method description below.

## 5.3 Access rights controller

Access rights controller methods can be used by supplier to provide access rights for client objects for historical data download. In this controller there is 3 methods and possible request and response data:

- *POST "/client/data-access-rights"* - method to provide access rights for client objects if supplier has client agreement;
- *GET "/client/granted-objects"* - method will return a list with all access rights which was provided to the supplier by the supplier it self or by the client;
- *POST "/client/data-access-rights/delete"* - method to delete access right from the list. Supplier can delete only access right which was provided by it self, but can not delete access rights which was provided by the client;

Please see possible requests and response data examples near methods descriptions below. In possible mock request examples there are provided two client permissions, one was provided by the supplier another by the client. So only one of the access right can be removed which was provided by the supplier.

## 5.4 Data Order controller

This controller has two methods:

- *POST "/data/data-orders"* - to order historical client data. It can be done if supplier has access right to do that;
- *GET "/data/data-orders/{orderId}/data"* - method to download client data by providing order ID.

Please see possible requests and response data examples near methods descriptions below.

# 6. DataHub Gateway API documentation

This document section describes the technical DataHub api documentation, which provides descriptions of API methods, request and response JSON data model structure, data validation rules, error handling, and other related information.

## 6.1 Declaration controller

Declaration controller provides information about API methods intended for objects non smart meters data declaration amount for DSO.

## 6.1.2 Method POST /gateway/declaration/reading/list

Resource description	
<b>Definition</b>	The method is intended to obtain the last declared data of the supplier's customer objects. The method is also designed to obtain changes in the declaration data.
<b>Detailed description of method in API documentation (ENG)</b>	POST /gateway/declaration/reading/list

### 6.1.3 Method send-declaration-data

Resource description	
<b>Definition</b>	The method is intended to provide readings of the scale declared by the object. The readings are given at the object level, so all counters on the full scale must be presented at the same time.
<b>Detailed description of method in API documentation (ENG)</b>	<a href="#">POST /gateway/supplier/send-declaration-data</a>
<b>Request URL</b>	<a href="https://dh-sandbox-api.eso.lt/gateway/supplier/send-declaration-data">https://dh-sandbox-api.eso.lt/gateway/supplier/send-declaration-data</a>

#### Possible request data

The declaration sandbox solution is implemented in such a way that the supplier can use all the data received in the "GET declaration data" method response (provided above) and try to declare or receive one of the error messages.

#### Possible response data

In success POST declaration data method call, it should provide 201 Created status. In unsuccessful request it should be provided one of the possible error code which are provided above.

## 6.2 Access right controller – new

### 6.2.1 POST/gateway/access-right/list

Resource description	
<b>Definition</b>	The method to obtain information and a list of granted rights.

### 6.11.7 Method GET/gateway/order/{orderId}/report-obj

Resource description	
<b>Definition</b>	The method is used to obtain objects report data.
<b>Detailed description of method in API documentation (ENG)</b>	GET/gateway/order/{orderId}/report - obj
<b>Request URL</b>	<a href="https://dh-sandbox-api-v2.eso.lt/swagger-ui.html">https://dh-sandbox-api-v2.eso.lt/swagger-ui.html</a>

Possible request	Possible response
<pre> {   "orderId": "100010" } </pre>	Possible response is submitted in the .csv file of the report

### 6.11.8 Method GET/gateway/order/{orderId}/count

Resource description

<b>Definition</b>	Method which will return count (number), how many items Supplier will get in ordered report (reports could have more than 1 item, so it is List). It should be used when supplier need to split data in few portions. This response should be used in reports' GET methods request, where Supplier can provide method parameters information.
