2 Preface

The Common Data Exchange Platform (hereinafter referred as *DH Platform*) Gateway is a component enabling guaranteed supplier to directly access DH Platform from within their IT systems and thus helps perform their activities more efficiently.

DH Gateway provides open standards-based interfaces allowing guaranteed supplier themselves (or with outside assistance) integrate their IT systems with DH Platform.

This document provides technical information on DH Gateway interfaces which is needed to integrate guaranteed supplier's information systems with DH Platform.

3 Environments

There are two DH Gateway environments the guaranteed supplier might access:

- “Sandbox” environment
- Production environment

Environment	Swagger Link	WEB Interface
Production	https://dh-api.eso.it/swagger-ui.html	https://datahub.eso.it/
Sandbox	https://dh-sandbox-api-v2.eso.it/swagger-ui.html#/	-

4 Digital certificates

In both the testing and production environments of the DH Gateway component, the identity of the guaranteed supplier is established using a TOKEN, which the guaranteed supplier's information system must provide each time the DH Gateway network service is called.

To get started:

1. The DSO responsible person sends the JWT key (JSON Web Token) to be used with each request to the DH API.
2. To make requests to the DH Gateway API - the TOKEN submission in the case of curl takes place.

5 Datahub Gateway API documentation

This document section describes the technical DH API documentation, which provides descriptions of API methods, request and response JSON data model structure, data validation rules, error handling, and other related information.

5.1 Order controller

5.1.3 GET /gateway/guaranteed-supplier/order/{orderId}/count

Resource description	
Definition	Method which will return count (number), how many items the guaranteed supplier will get in ordered report (reports could have more than 1 item, so it is List). It should be used when the guaranteed supplier needs to split data in few portions. This response should be used in reports' GET methods request, where guaranteed supplier can provide method parameters information.
