# 1. Documentation version history

The table below provides information on document version history:

Version	Date	Description
1.0.0	2024-12-02	Initial document version.

**Note:** *Changes in the table marked in white are already deployed, while those marked in green will be deployed soon.*

## 2. Definitions and abbreviations

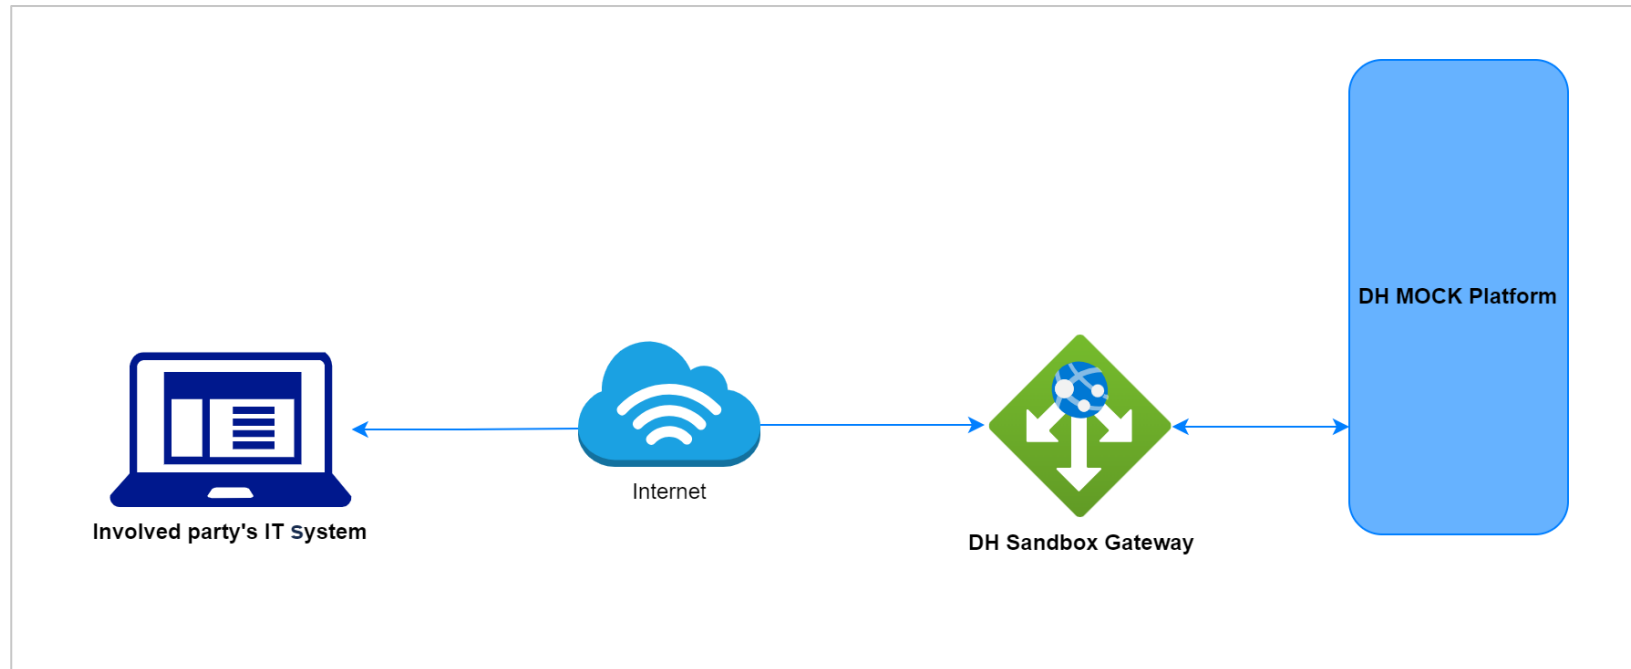

Definition / abbreviation	Description
DH Gateway	A component of the DH Platform that enables third-party IT systems to directly access the platform and achieve a higher degree of process automation
DH, DH Platform	Common Data Exchange Platform.
DSO, ESO	Energy distribution system operator – AB „Energijos skirstymo operatorius“

### 3. Preface

The Common Data Exchange Platform (hereinafter referred to as the DH Platform) Gateway is a component that enables third parties to directly access the DH Platform from within their IT systems, thereby helping them perform their activities more efficiently.

DH Gateway provides open standards-based interfaces, allowing third parties to integrate their IT systems with the DH Platform, either by themselves or with outside assistance.

This document provides the technical information on DH Gateway interfaces needed to integrate third-party information systems with the DH Platform.

## 4. Environments

There are two DH Gateway environments that the third-party might access:

- Sandbox environment
- Production environment

The DH Sandbox environment consists of a Mock API Gateway with mock requests and responses (scenarios). There is no connection to a database or any data source; all possible requests and responses are hard-coded into the mock API source code and do not have any data selection logic or rules. This data is real, depersonalized data from DSO customers. Sandbox request and response scenarios will be provided in an additional document and should be used solely for preparation to integrate with the DH production API environment or for testing purposes.

Environment	Swagger Link	WEB Interface
Sandbox	<a href="https://dh-sandbox-api-v2.eso.lt/swagger-ui/index.html#/">https://dh-sandbox-api-v2.eso.lt/swagger-ui/index.html#/</a>	-

## 5. Third-party digital certifications

In both the testing and production environments of the DH Gateway component, the identity of the third-party is established using a TOKEN, which the third-party information system must provide each time the DH Gateway network service is called.

### **To get started:**

1. The DSO responsible person sends the JWT key (JSON Web Token) to be used with each request to the DH API.
2. To make requests to the DH Gateway API, the TOKEN submission takes place in the case of cURL.

## 6. DataHub Gateway API documentation

This section of the document provides detailed information about the DataHub API, including descriptions of API methods, the structure of request and response JSON data models, data validation rules, error handling, and other related topics.

### 6.1 Object controller

## 6.2.2 POST /gateway/third-party/access-right

Resource description	
<b>Definition</b>	The method is for assigning a right to an object to a third party. Using this API method, a third-party can access a customer's historical data for client objects. Once granted, the third-party can retrieve this data for a specified period
<b>Detailed description of method in API documentation (ENG)</b>	POST /gateway/third-party/access-right

### 6.2.3 POST /gateway/third-party/access-right/{accessRightId}/cancel

Resource description	
<b>Definition</b>	The third-party can revoke the rights granted to them. These rights were either granted by the third-party with the client's permission or directly by the client through ESO-S. The third-party can only revoke the rights they granted themselves
<b>Detailed description of method in API documentation (ENG)</b>	POST /gateway/third-party/access-right/{accessRightId}/cancel

### 6.3.2 GET/gateway/third-party/order/{orderId}/count

Resource description	
<b>Definition</b>	This method returns the count (number) of items a third-party will receive in an ordered report. Since reports can contain more than one item, the result is a list. This method is useful when the supplier needs to split data into several portions. The response should be used in the GET methods of reports, where the third-party can provide method parameters information
